

Our Mission

Aviation English Training (AET) and Florida Institute of Technology are global leaders in online/on-site "Blended Model" Aviation English training. We are dedicated to aviation customers whose success depends on achieving English proficiency to meet the International Civil Aviation Organization (ICAO) Level 4 Standards by 2011 and beyond. Our unique blended online/on-site expertise covers accent reduction, radio communication, subject matter expertise and the professional evaluations that are used when granting ICAO certification.

State-of-the-art, Web-based and On-site training

AET's online aviation English courses have a built in learning methodology that will get you top-of-the-class scores. Online courses are available anytime from anywhere—24 x 7. Whether you work for a commercial airline, for the government, you're attending a flight academy or you are in general aviation—the flexibility of training to meet your schedules is one reason to enroll in online training. Our on-site training component at Florida Institute of Technology exposes you to accent reduction and communication specialists who help ensure you are understood.

Build Your English Radiotelephony Skills

When you complete AET's Aviation English Program to prepare for ICAO certification, you will become totally confident in handling the radio calls in English. AET simulates what you will experience as a pilot or controller and during training at Florida Institute of Technology, you practice with a Safety Flight Officer who has achieved Level 6 proficiency.

You can self-register to see the demo lessons for each skill level course at:
<http://demo.aet.aviation-training-online.com>

Get Prepared Before You Start a Technical Training Course Online and On-site Courses Provide Pronunciation Activities

AET and Florida Institute of Technology have built pronunciation activities into each skill level course. The trainee reads while listening to properly spoken American or British English. He/she then speaks into a microphone to record and then playback his/her own recording of the same information. Pronunciation deficits are identified and remedied through on-site training with a certified specialist. These pronunciation activities build self-confidence when communicating in English.

ATC Communication in English from Basic Level to Advanced

ATC Communication quizzes are based upon real ATC tapes from a variety of locations worldwide. Pilots and controllers practice listening to a variety of English accents, just as they will on their jobs, as they build radiotelephony skills in English.

Do You Have a Competitive Edge When Talking with Recruiters?

Get certified for English ICAO level 4 so that recruiters will put you on the top of the list when interviewing for pilot or air traffic controller positions. If you wait for them to train you, you could lose the job to someone who has the certification. Everyone must be certified by 2011.

Competitive Pricing

Florida Tech and AET's online assessment tests and on-site Aviation English training courses are inexpensive compared to the programs provided by most language training organizations. Whether you are in general aviation or commercial aviation, you must have the ICAO level 4 certification by 2011. Why not register today? Get the training done quickly—you can still maintain your normal work and family schedules.

Score Higher—Maximize Your Training

AET's online learning system has several documented benefits. It

- applies the best practices from the field of accelerated learning
- remembers what each trainee has learned or has not learned and customizes the trainee's review based on his or her individual needs
- continuously adapts the learning process to the trainee's learning needs
- schedules reviews for each trainee and sends review reminders
- enables trainees to retain knowledge months after completing the course
