Hepatitis A in Florida

January 1, 2018 – August 10, 2019

From January 1, 2018 through August 10, 2019, **2,740 hepatitis A cases** were reported.

The number of reported hepatitis A cases more than doubled from 2016 to 2017 and nearly doubled again in 2018 after remaining relatively stable in previous years. Case counts in 2019 have already surpassed those in 2018.

There were **68 hepatitis A cases** reported in week 32 (8/4/19–8/10/19). Weekly case counts have steadily increased overall since week 1, 2018.

The Florida Department of Health is actively working to vaccinate those most at risk for hepatitis A infection. Since October 2018, **the number of first doses of hepatitis A vaccine administered by both private providers and county health departments to adults age 18 years and older, as recorded in Florida SHOTS, remained well above the previous 5-year-average.** In week 32 (8/4/19–8/10/19), 7,895 doses were administered. **Vaccination is the best way to prevent hepatitis A infection.**
